

St. Peters Church

7223 Banister Rd., Kansas City, MO 64137

Top: Dryvit and vinyl lap siding were combined to create an attractive, yet inexpensive exterior.

Above: The west side of the building is the most visible view from the road, so a cross design framed by simple architectural detail and steeple was created to enhance the curbside appeal.

Left: The otherwise unusable building site was prepared by relocating a creek which ran through the middle of the property.

- 12,800 square feet
- Pre-engineered steel structure
- Dryvit and vinyl siding
- 24-gauge standing seam roof system
- End-use: Worship and classroom facility
